Solid Surface Solutions For Education

How we can help with your Education project

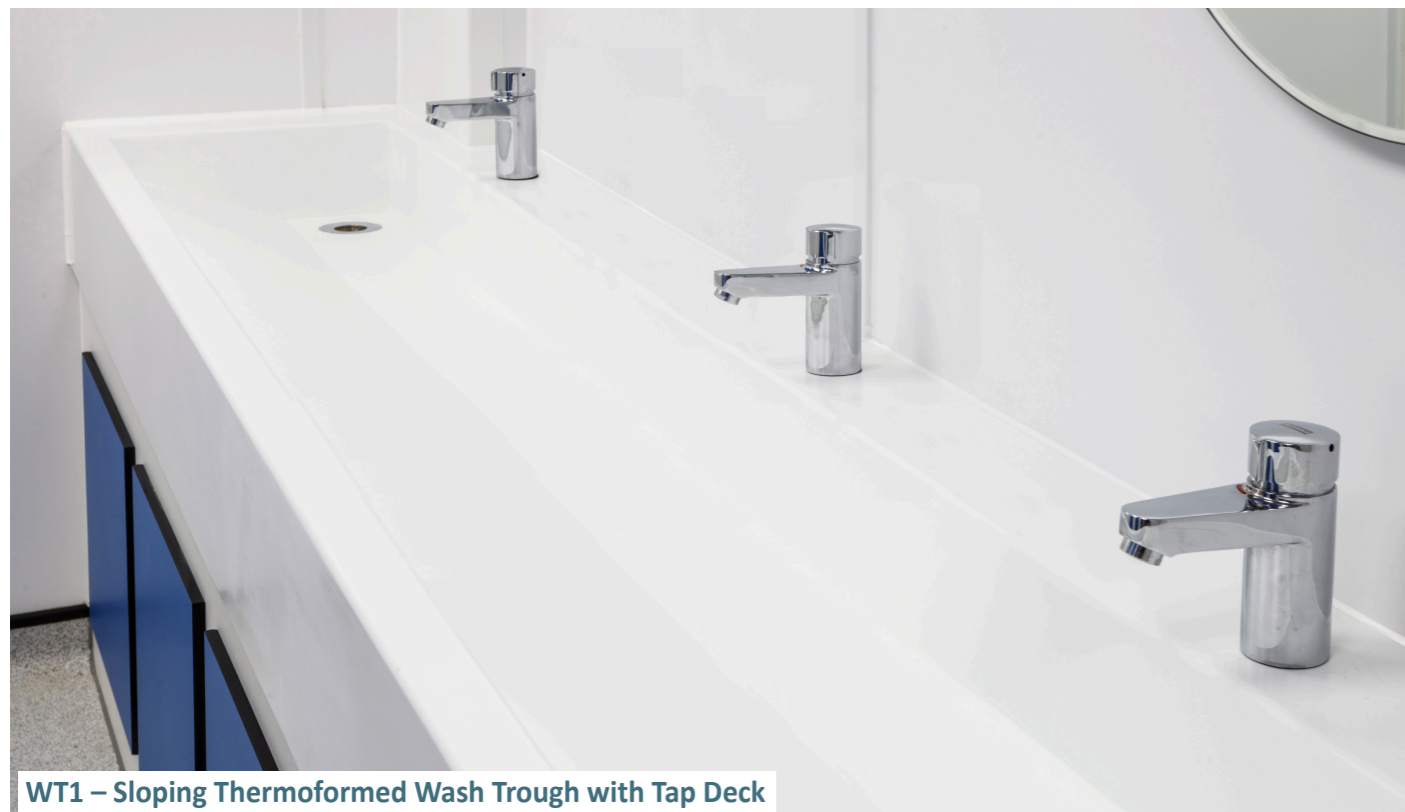

With over 25 years experience, we really are the solid surface experts when it comes to education washrooms. We have a range of wash troughs and vanities suitable for all ages, from nurseries and primary schools all the way up to colleges and universities. Fabricating in-house means that we keep complete control of the manufacturing process from start to finish, ensuring we bring you the highest quality solid surface washroom products.

Why work with us

- We offer a wide range of solid surface wash troughs, vanities and Superloo vanities perfect for school washrooms of all ages
- Our wash troughs comply with the School Output Specification for Sanitaryware published by the Department for Education and offer an extremely durable and hygienic washroom solution
- We can pre-plumb basins, taps and wastes to help reduce installation time on site
- We will liaise with you at design stage and produce NBS specifications to suit your requirements
- We offer a speedy 2 day service level on all enquiries and a 4 week turn around on orders
- Your dedicated project manager will oversee your project from start to finish
- We have an online technical library with profile drawings, data sheets and CAD blocks available

For the school

- Our thermoformed wash troughs offer a seamless, smooth, curved finish with minimal hard edging that could collect dirt offering improved hygiene
- The non-porous nature of our solid surface wash troughs and vanities makes them resistant to stains, less likely to harbour bacteria and easy to clean and maintain
- Solid surface can be repolished and repaired, ensuring longevity and making it cost effective
- Our vanity underframes can be supplied in a wide range of colours to really brighten up the washroom area and conceal and secure all pipework
- We offer age-appropriate brassware for all pupils, from toggle to press action taps, with features including self-closing operation to help reduce accidental flooding and water consumption
- We provide a 5 year guarantee on our wash troughs and vanities for peace of mind

WT1 – Sloping Thermoformed Wash Trough with Tap Deck

WT4 – Flat Bottomed Thermoformed Wash Trough without Tap Deck

Our solid surface wash troughs are extremely hardwearing and durable and ideal for nurseries, schools, colleges and universities. The hygienic, non-porous material stops bacteria being able to thrive and makes cleaning quick and easy. Perfect for busy school washrooms, wash troughs allow multiple users at once and encourage the flow of pupils through the washroom area.

Features

- We have a selection of 8 profiles, all available for deck or wall mounted taps. From flat bottomed to sloping, we have wash troughs to suit all applications
- Our WT3 Slim and WT4 Slim flat bottomed thermoformed solid surface wash trough profiles comply with the School Output Specification for Sanitaryware published by the Department for Education
- By thermoforming our wash trough bodies from a single piece of solid surface, we are able to produce seamless, smooth, curved wash troughs with minimal hard edges that can create dirt traps offering a more hygienic unit
- Solid surface is renowned for its longevity, but if necessary can easily be repolished and restored to its original satin finish, should any scratches build up over time
- See page 5 for wash trough support options

WT3 - Flat Bottomed Thermoformed Wash Trough with Tap Deck

Where a solid surface vanity unit and hand wash basin are preferred, we offer a selection of profiles that, when paired with our vanity underframe, provide a tough and durable solution for busy school washrooms. Our Superloo vanity unit, along with our sensor taps and accessories, is also an excellent choice for the expanding number of Superloo-style washrooms, particularly in higher education.

Features

- Our vanity units are compatible with semi-recessed and inset basins, and we have profiles with and without upstands
- We can also install solid surface integrated wash basins into fully inset vanity tops. An integrated basin eliminates the need for a separate sink, reducing the crevices where dirt can accumulate creating a truly seamless easy to clean solution
- Our Superloo vanity units with integrated wash troughs can be supplied with or without an integral bin chute depending on your project requirements
- We have a baby change profile for nurseries and when required in higher education settings
- See page 5 for vanity support options

VT3 – Vanity Top for Inset Hand Wash Basin, with Upstand and Integrated Solid Surface Wash Basins

Our solid surface wash troughs, vanity units and Superloo vanity units can either be supplied with our vanity underframes or with cantilever brackets. Our vanity underframes offer the benefit of easy access IPS panels (with optional hinges and locks) and hide and secure all pipework. They are available in a wide range of solid surface and laminate colours to really brighten up the washroom area.

Vanity Underframes

- Our MFC underframe with HPL panels is perfect for dry environments and budget friendly options
- Whilst our SGL underframe and panels is suitable for more demanding environments and totally impervious to water
- Both are available in our 34 laminate finishes
- Also suitable for wet and dry environments are our Solid Surface underframe and panels
- Vanity underframes keep all pipework hidden and secure, hinged and lockable panels are also available

Cantilever Brackets

- For a modern, floating appearance cantilever brackets can be used. They save valuable floor space and also offer flexibility of positioning
- Manufactured from ultra-strong steel and powder coated in light grey, they have been designed to withstand the large load of both wash troughs and vanity units
